

EBU STL Converter Utility

Objective

Utility to convert EBU STL files to various standard and proprietary web file formats.

Explanation

As part of the expansion of captioning services for web accessibility, this converter utility is a solution to convert standard broadcast captioning files (EBU STL format) into other standard and proprietary web file formats such as SubRIP, WebVTT, Swift Text, and Echo360 etc. More formats can be added if required or according to user requirement.

This utility has the power feature of viewing the encrypted data of EBU STL file. Information includes the GSI and TTI block information for selected file.

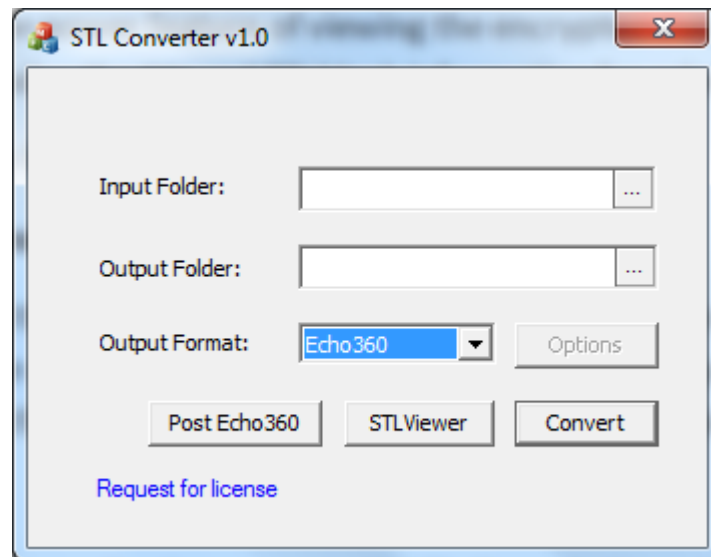

Multiple files can be converted at a go.

Download and Installation Instructions

Kindly download the executable file. This will work on windows platform only. This utility can be developed for other platforms / Operating systems if required. The downloaded file has all the functionality and it would work for 15 days trial.

Instructions for using the Utility

After installing the application, execute the file from desktop shortcut or from the start menu. The initial screen would be like this one.

Input Folder

Select the input folder where the EBU STL files are located or to be converted. It processes these files only. The file has different capabilities such as text color, background color, positioning, alignment, speaker name and number of lines.

Output Folder

Select the location of output folder where converted files are to be saved. This will default to previous location used by the user. The files are saved into a folder names as YYYYMMDD-HHMMSS to maintain the uniqueness and prevent the overwriting of any existing files.

Output Format

This is used to select the output format for the conversion. Currently following formats are supported by the utility - SubRIP, WebVTT, Swift Text and Echo360.
